

## DATO DDR4 Unbuffer SODIMM

Experience Power and Efficiency with DATO DDR4

DATO's DDR4 module operates at a low voltage of just 1.2V, significantly reducing power consumption. This not only minimizes heat generation but also helps maintain the ambient temperature around the system. Fully compliant with JEDEC standards, this product guarantees 100% compatibility with all major platforms on the market. DATO's DDR4 memory module stands out for its exceptional stability, long-term efficiency, and low power consumption, ensuring superb performance for all users.

| Memory module type    | DDR4 260 Pin Non-ECC Unbuffered SODIMM |      |       |
|-----------------------|----------------------------------------|------|-------|
| Frequency             | 2666                                   | 3200 | 3600  |
| Cas Latency           | CL19                                   | CL22 | CL18  |
| Capacity              | 4GB                                    | 4GB  | 4GB   |
|                       | 8GB                                    | 8GB  | 8GB   |
|                       | 16GB                                   | 16GB | 16GB  |
|                       | 32GB                                   | 32GB | 32GB  |
| Operating Temperature | 0°C to 70°C                            |      |       |
| Voltage               | 1.2v                                   | 1.2v | 1.35v |
| Warranty              | 3 Years                                |      |       |
